

Diego Hernandez Maya

Junior Software Engineer | Backend Developer | AI/ML Engineering Student | Open Source Contributor

Santiago, Chile

dh8939693@gmail.com | +56 9 8654 1307

GitHub: <https://github.com/VECTORG99>

LinkedIn: <https://www.linkedin.com/in/vectorg99/>

Professional Summary

Computer Science Engineering student specializing in Artificial Intelligence at Duoc UC, focused on software engineering, backend development, machine learning, data engineering, Linux, and open source. Hands-on experience building full stack and backend projects with Python, Java, FastAPI, Spring Boot, React, PostgreSQL, Supabase, BigQuery, Docker, GitHub Actions, and scikit-learn. Developed an end-to-end London crime data platform with ETL pipelines, ML inference, FastAPI backend, React frontend, CI/CD workflows, and cloud deployment. Also built Yap, a local CPU-only AI assistant using Llama 3.2 and llama.cpp with whitelist-based security controls. Seeking junior or internship roles in Software Engineering, Backend Engineering, AI/ML Engineering, or Data Engineering.

Technical Skills

Programming Languages: Python, Java, JavaScript, Bash, SQL

Backend: FastAPI, Spring Boot, REST APIs, Uvicorn, Quarkus

Frontend: React, Vite, Material UI, Chart.js, HTML, CSS

Databases: PostgreSQL, Supabase, BigQuery

Artificial Intelligence: Llama 3.2, llama.cpp, GGUF models, local AI inference, CPU-only inference

Machine Learning: scikit-learn, Logistic Regression, Random Forest Regressor, feature engineering, model evaluation, joblib

Data Engineering: ETL pipelines, pandas, data cleaning, data validation, CSV, Parquet, SQLAlchemy

DevOps and CI/CD: Docker, GitHub Actions, Render, Vercel, CI pipelines, automated testing

Testing: pytest, unit testing, security testing, functional testing, mocking

Linux and Automation: Linux, Debian, Hyprland, Waybar, shell scripting, system configuration

Version Control and Open Source: Git, GitHub, pull requests, code review, issue-based collaboration

Experience

Open Source Contributor

Open Source Santiago — Santiago, Chile

January 2025 - Present

- Contributed to HomeDir, a Quarkus-based open source community platform for DevRel, Open Source, InnerSource, events, projects, CFP workflows, and contributor identity integrations.

- Implemented frontend, accessibility, internationalization, security, documentation, and CI-related improvements through GitHub pull requests.
- Collaborated through pull requests, code reviews, issue discussions, and iterative fixes in an active open source workflow.
- Contributed fixes related to Content Security Policy, redirect sanitization, rate limiter hardening, escaping values in `innerHTML`, accessibility skip links, layout consolidation, and documentation parity.

Software Developer

Personal and Academic Projects — Santiago, Chile

March 2024 - Present

- Built full stack, backend, machine learning, data engineering, Linux, and local AI projects using Python, Java, FastAPI, React, PostgreSQL, Supabase, BigQuery, Docker, GitHub Actions, and Linux tooling.
- Designed REST APIs, ETL workflows, ML model serving flows, CI/CD pipelines, and deployment configurations across public projects.
- Developed local AI tooling with Llama 3.2 and llama.cpp, including whitelist-based safety controls, CPU-only inference, and automated testing.
- Created Linux desktop customization and automation projects for Hyprland/Omarchy using shell scripting, Lua, CSS, and system configuration.

Projects

London Crime Data Platform

GitHub: <https://github.com/VECTORG99/DataGestor>

End-to-end platform for analyzing historical London crime data from 2008 to 2016. Processes approximately 3 million public records from BigQuery through a Python ETL pipeline, performs cleaning, validation, aggregation, CSV/Parquet persistence, and loading into Supabase/PostgreSQL. Includes scikit-learn models for historical estimation, a FastAPI inference API, and a React dashboard deployed with cloud services.

Technologies: Python, pandas, BigQuery, Supabase, PostgreSQL, SQLAlchemy, FastAPI, React, Vite, Material UI, Chart.js, scikit-learn, Logistic Regression, Random Forest Regressor, Docker, GitHub Actions, Render, Vercel, pytest.

Concepts: Data Engineering, ETL, data validation, machine learning, model serving, REST APIs, CI/CD, cloud deployment, end-to-end architecture.

Yap

GitHub: <https://github.com/VECTORG99/Yap>

Local AI assistant for resource-constrained Linux educational environments. Runs Llama 3.2 with

llama.cpp on CPU, without requiring Internet connectivity for base functionality. Includes intent classification, controlled application launching, webfetch restricted to approved domains, low-memory configuration branches, and automated tests.

Technologies: Python, Bash, llama.cpp, Llama 3.2, GGUF, Debian Linux, pytest, GitHub Actions, CMake, shell scripting.

Concepts: Local AI, CPU-only inference, whitelist-based security, CLI design, testing, Linux automation, system architecture.

Omarchy Frutiger Aero

GitHub: <https://github.com/VECTORG99/omarchy-frutiger-aero>

Open source Frutiger Aero theme set for Omarchy/Hyprland with light and dark variants, Waybar configuration, Hyprland configuration, SDDM customization, Alacritty transparency, EWW widgets, scripts, and automated installation. Featured in Awesome Omarchy.

Technologies: Linux, Hyprland, Waybar, Shell scripting, Lua, CSS, SCSS, Alacritty, SDDM, EWW, Omarchy.

Concepts: Linux automation, desktop configuration, open source packaging, scripting, theming, configuration management.

Open Source Santiago / HomeDir

GitHub: <https://github.com/os-santiago/homedir>

Contributions to HomeDir, a Quarkus-based community platform for DevRel, Open Source, InnerSource, events, projects, CFP workflows, and contributor identity integrations. Participated through pull requests focused on security, accessibility, frontend, documentation, i18n, CI, and maintainability.

Technologies: Java, Quarkus, GitHub Actions, HTML, CSS, JavaScript, i18n, accessibility, web security, Git.

Concepts: Collaborative development, pull requests, secure web development, accessibility, documentation, CI/CD.

Education

Duoc UC — Santiago, Chile

Computer Science Engineering, Specialization in Artificial Intelligence
2024 - 2027

Relevant focus: software engineering, artificial intelligence, backend development, machine learning, databases, data engineering, and practical full stack development.

Certifications

Full Stack Developer Certification — Duoc UC

Issued: March 2026

Languages

Spanish: Native

English: Advanced / Professional Working Proficiency

Additional Information

- Interested in junior and internship opportunities in Software Engineering, Backend Engineering, AI/ML Engineering, Data Engineering, and Open Source.
- Strong practical focus on Linux, backend systems, data pipelines, local AI, testing, CI/CD, and public GitHub projects.
